

ComfortHushTM

Made for urban living

In contrast to many other environmental problems, noise pollution continues to grow.

-World Health Organisation

Enjoy your neighbourhood with less noise

Glass connects us with the beauty of the outside world, but ordinary glass can also allow unwanted noise in. Choose ComfortHush™ to help keep noise out and comfort in.

Intrusive noise coming into your home from traffic, machinery, and disruptive neighbours can make it harder for your family to talk, learn, sleep and relax.

To help make your home or space the sanctuary it should be, Oceania Glass™ has engineered ComfortHush to reduce unwanted noise entering your home whilst providing excellent energy efficiency.

ComfortHush

ComfortHush, a member of the Genuine Hush range of acoustic performance glass, features a durable Low E coating to help keep your home cooler in summer and warmer in winter and can be used single glazed or as part of a double glazed unit.

Being a laminated glass, ComfortHush is a Grade A safety glass and reduces fading of interior furnishings by eliminating 99% of Ultra Violet (UV) light. So if you'd like to add tranquillity, thermal comfort and improved energy efficiency to your urban lifestyle, ComfortHush takes your windows beyond the ordinary.

Almost 40% of people are affected by traffic noise.

- Australian Academy of Science

Glazing

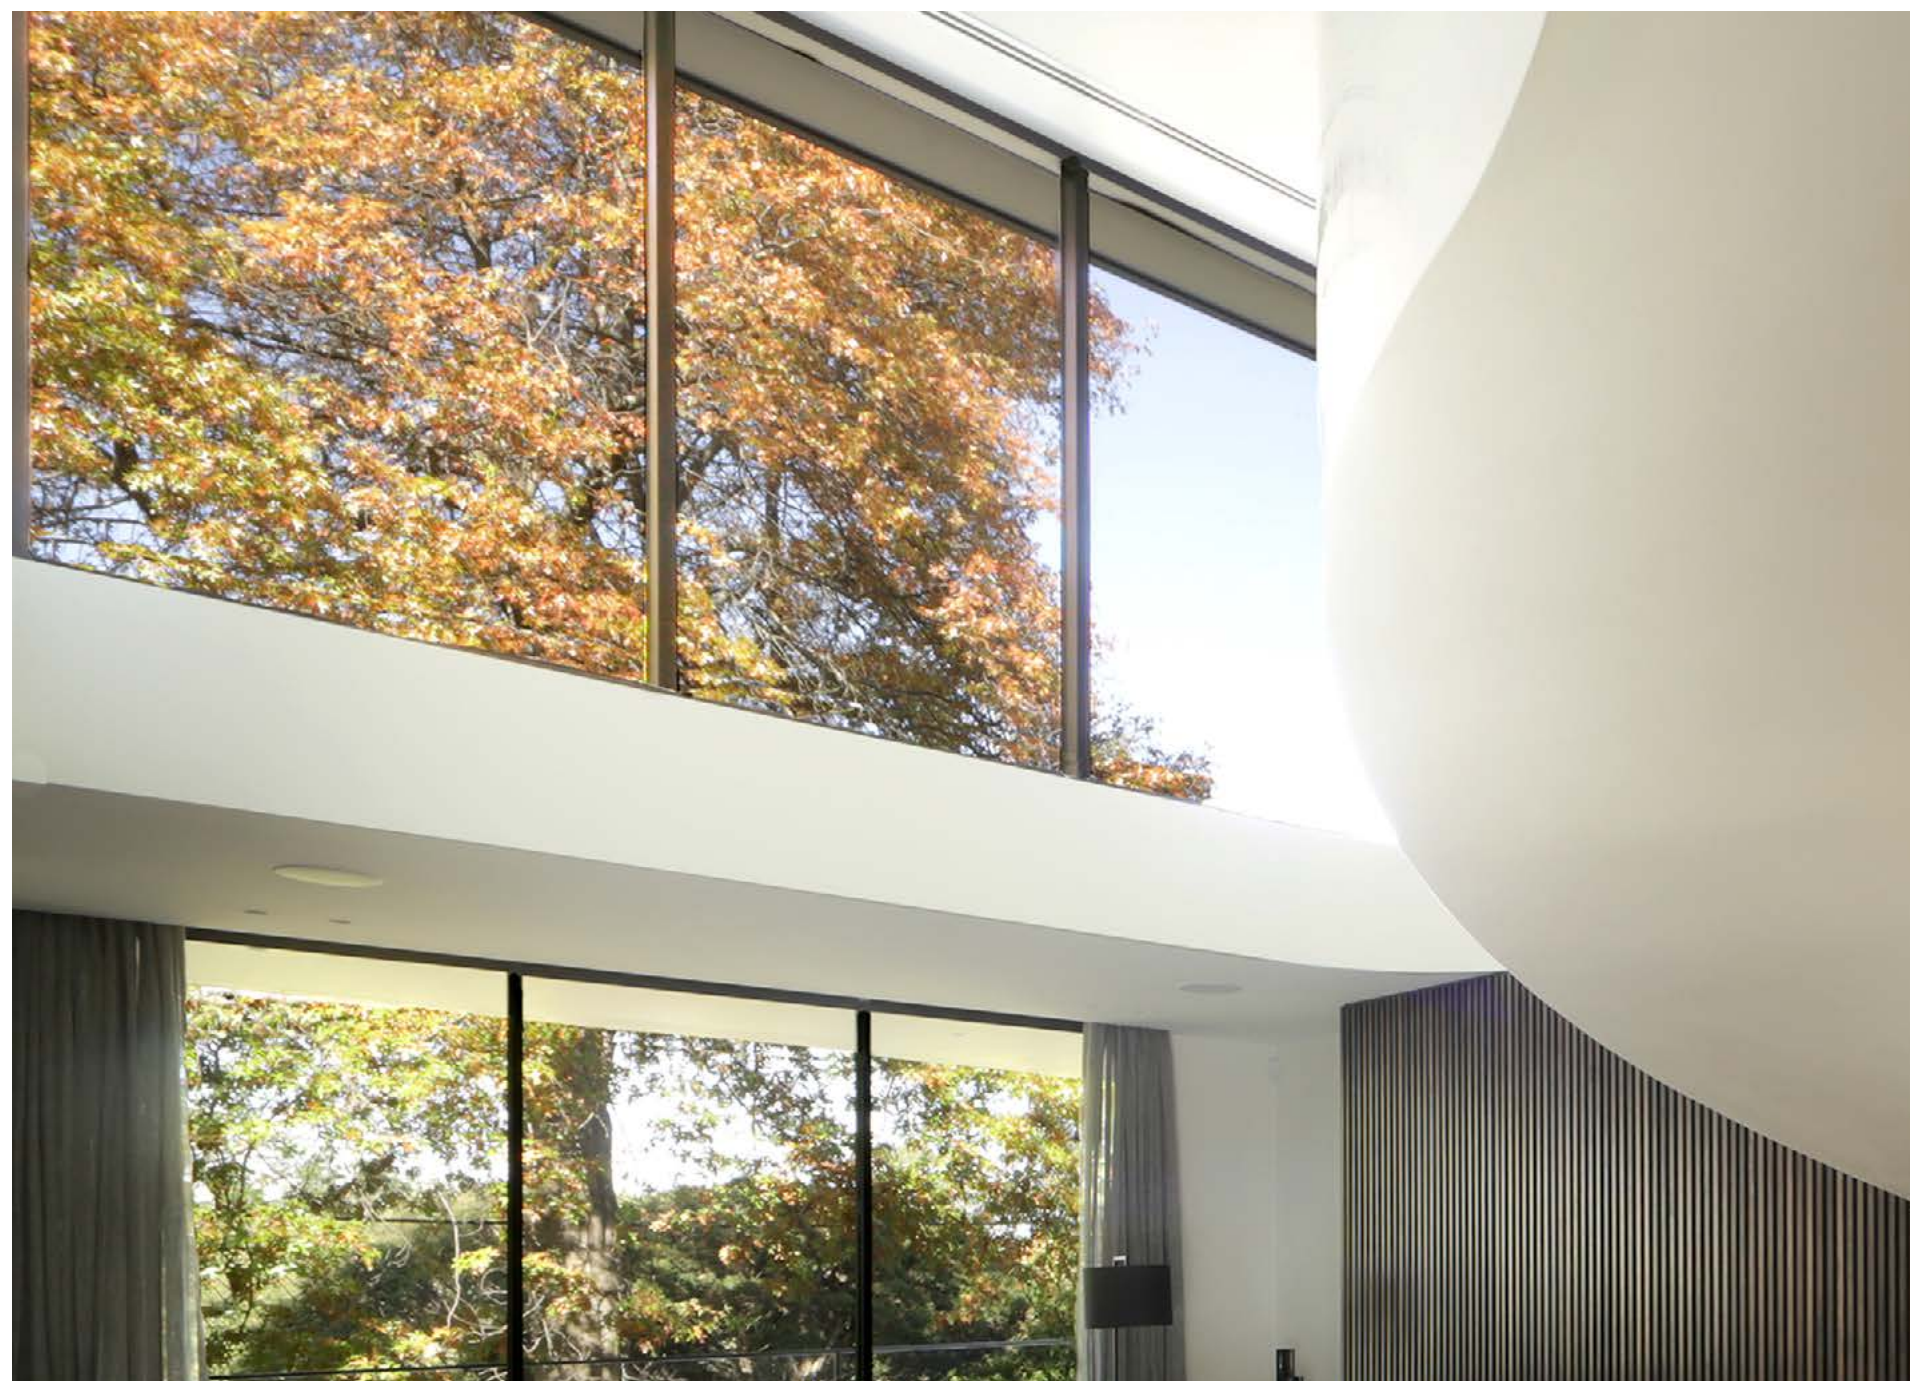

Single Glazing Noise Reduction

6.5mm ComfortHush reduces noise by 29% compared to 4mm standard glass.†

Double Glazing Noise Reduction

When incorporated into a double glazed unit configuration of 6mm/16mm gap/6.5mm, ComfortHush reduces noise by 50% compared to 4mm standard glass.†

6

†This double-glazed unit is a standard configuration and has a Rw of 41. Alternative double-glazed configurations are possible to accommodate units into frames with smaller glazing pockets. Greater noise reduction is possible by selecting an alternative double-glazed unit. Please visit our website at www.oceaniaglass.com.au for more information. The acoustic comparisons and Rw values are based on glass only and may differ depending on the frame used.

Performance

7

Exceptional performance is no coincidence.

Unlike ordinary glass, ComfortHush incorporates a unique 3-layer laminate construction. Perfect for residential applications, it reduces sound across critical frequencies and enables lighter and thinner glass construction.

Make a sound decision on frames.

Avoiding leaks and gaps in your window frame is essential to achieve a high performing acoustic window. Don't compromise on performance or quality; speak to your window supplier about installing ComfortHush in a well-sealed and professionally fitted frame.

ComfortHush Range

From a name you can trust.
As the only Australian architectural
glass manufacturer, we are the
local experts in glass. Backed by
a local warranty, ComfortHush is
tailored to the demands of the
Australian market.

ComfortHush Clear

ComfortHush Grey

ComfortHush Translucent

The benefits are clear

Talk to an experienced architect, builder or window fabricator to learn more about how ComfortHush can help keep your home more tranquil.

Improve comfort and energy efficiency.
ComfortHush provides up to 39% better insulation than ordinary glass† resulting in a more comfortable home and energy savings all year round.

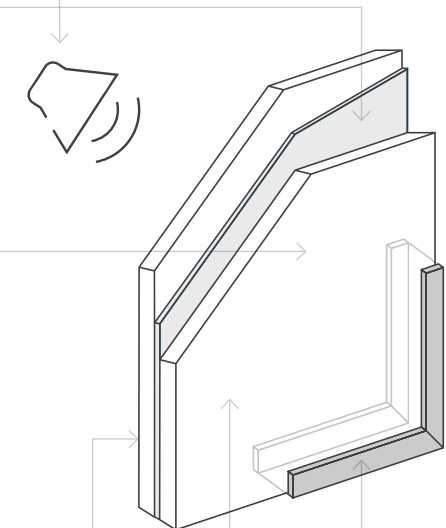

Noise reduction technology.
3-layer laminate dampens noise and reduces vibration.

Better protection.
ComfortHush is a Grade A Safety glass and helps protect your interior furnishings from fading by eliminating 99% of Ultra Violet (UV) light.

Reduce unwanted noise.
6.5mm ComfortHush provides up to a 5dB reduction in the amount of sound transmitted inside compared to 4mm ordinary glass.*

Transparent insulation.
Low E coating acts like transparent insulation.

Use single or double glazed.
ComfortHush can be used in new or retrofitted** single glazed windows and also combined in double glazing units.

*Based on comparison of weighted sound reduction index (Rw) of 6.5mm ComfortHush and 4mm annealed glass.
†Based on U-value comparison of 4mm annealed glass.
**Window frames should be assessed for suitability.

MAKING IT EASIER TO TELL YOU HAVE GENUINE HUSH™
